

# SIGNED, SEALED, DELIVERED

Managing the medication delivery process is a challenge for hospitals and health systems—leading to distractions, rework and waste for pharmacy and nursing. This disconnected supply chain is detrimental to productivity and to patients.

## A Million REASONS

Preventable medication errors injure **1,500,000** people each year, the **6<sup>th</sup>** leading cause of death in the United States, costing **\$3,500,000,000** in unnecessary medical costs.\*

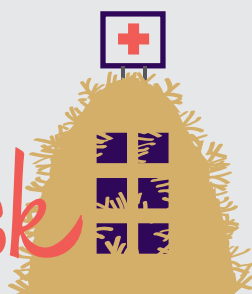

## LACK OF FOCUS

Distractions contribute to **45%** of medication errors in hospitals and health systems. While the focus has traditionally been on physicians and nurses, pharmacy is inundated with inquiries about missing medications.\*

## FINDING A Needle IN A Haystack

Research shows that **22%** of a nurse's time was spent looking for missing medications.\*

## Off the Hook

**62%** of pharmacists pinpoint "too many phone calls" as the number one reason for medication errors.\*

## Cold Calling

Research shows that pharmacies field as many as **10 calls per hour** from nurses inquiring about patient orders.\*

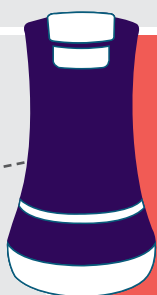

## 404 TRIAL & ERROR

The **error rate** for prescriptions with one or more interruptions is **6.65%**.\*

## Back on Track

Only **one complete solution** for medication tracking.

### MEET DELIVERY MANAGER

Delivery Manager is an intelligent tracking application that provides a single point of control, accountability and traceability for patient order delivery—creating connections throughout the medication distribution process.

Achieving full chain-of-custody can reduce missing medications, decrease distractions in the pharmacy and minimize the opportunity for medication errors.
